FEE CALCULATION**1. BASIC FILING, SEARCH, AND EXAMINATION FEES**

Application Type	FILING FEES		SEARCH FEES		EXAMINATION FEES		Fees Paid (\$)
	Fee (\$)	Small Entity Fee (\$)	Fee (\$)	Small Entity Fee (\$)	Fee (\$)	Small Entity Fee (\$)	
Utility	300	150	500	250	200	100	
Design	200	100	100	50	130	65	
Plant	200	100	300	150	160	80	
Reissue	300	150	500	250	600	300	
Provisional	200	100	0	0	0	0	

2. EXCESS CLAIM FEES

Fee Description	Fee (\$)	Small Entity Fee (\$)
Each claim over 20 (including Reissues)	50	25
Each independent claim over 3 (including Reissues)	200	100
Multiple dependent claims	360	180

<u>Total Claims</u>	<u>Extra Claims</u>	<u>Fee (\$)</u>	<u>Fee Paid (\$)</u>	<u>Multiple Dependent Claims</u>
_____ - 20 = _____	x _____	= _____		<u>Fee (\$)</u> <u>Fee Paid (\$)</u>
<u>Indep. Claims</u>	<u>Extra Claims</u>	<u>Fee (\$)</u>	<u>Fee Paid (\$)</u>	
_____ - 3 = _____	x _____	= _____		

3. APPLICATION SIZE FEE

If the specification and drawings exceed 100 sheets of paper (excluding electronically filed sequence or computer listings under 37 CFR 1.52(e)), the application size fee due is \$250 (\$125 for small entity) for each additional 50 sheets or fraction thereof. See 35 U.S.C. 41(a)(1)(G) and 37 CFR 1.16(s).

<u>Total Sheets</u>	<u>Extra Sheets</u>	<u>Number of each additional 50 or fraction thereof</u>	<u>Fee (\$)</u>	<u>Fee Paid (\$)</u>
_____ - 100 = _____	/50	_____ (round up to a whole number) x _____	= _____	

4. OTHER FEE(S)

Non-English Specification, \$130 fee (no small entity discount)	
Other (e.g., late filing surcharge):	<u>Fees Paid (\$)</u>
Extension for response within second month minus one	
1252 month previously paid	330.00
1801 Request for continued examination (RCE) (see 37 ...)	790.00

EXAMINING GROUP 2854
RESPONSE TO FINAL OFFICE ACTION
UNDER 37 C.F.R. 116 EXPEDITED PROCEDURE

Sir:

The following is in response to the Final Office Action mailed January 12, 2005, in the above referenced application.

A petition has also been filed herewith requesting a one (1) month extension of time to May 12, 2005, to respond to the above referenced Office Action. Applicant also conditionally

Applicant: K. Matsuyama et al.

U.S.S.N.: 10/630,470

Response to Final Office Action

Page 2 of 9

petitions for a further extension time to provide for the possibility that such a petition is required.

As indicated below, please charge Deposit Account No. **04-1105** for the required fee.

Please amend the above-identified application as follows:

Remarks begin on page 6 of this paper.

REMARKS

Applicants appreciate the Examiner's thorough examination of the subject application and request reconsideration of the subject application based on the foregoing amendments and the following remarks.

Applicants respectfully request a telephone interview with the Examiner to further discuss Applicants response to the within rejection of the pending claims. As such, Applicants respectfully request that the Examiner contact the undersigned prior to issuance of Advisory Action.

Claims 1-9 are pending in the subject application.

Claims 1-9 stand rejected under 35 U.S.C. §103.

35 U.S.C. §103 REJECTIONS

Claims 1-9 stand rejected under 35 U.S.C. §103 as being unpatentable over Takehara et al. [USP 6,290,220; "Takehara"] in view of Shiraishi [USP 6,445,891"].

In the Office Action its is asserted that Takehara teaches an image forming apparatus having a sheet eject mechanism which is moveable between an initial position and a sorting position and a control device for controlling the sheet feeding mechanism via sensors. In this regard, the Office Action asserts that the features identified by reference numerals 7, 180b and 140 correspond to the sheet ejection mechanism of the present invention. Applicants respectfully disagree with this characterization of what is being taught and disclosed in Takehara.

The Office Action also admits that Takehara does not clearly teach the control device that regulates a delay time required for the sheet mechanism moving from an initial position to the sorting or other position. It is further asserted that Shiraishi teaches a control device which regulates the delay time for the sheet eject mechanism moving from a position to other position via the initial sensor, the timing sensors and an offset motor. Applicants respectfully traverse.

Although held in connection with a rejection under 35 U.S.C. §102, the Federal Circuit has indicated that in deciding the issue of anticipation, the trier of fact must identify the elements of the claims, determine their meaning in light of the specification and prosecution history, and identify *corresponding elements* disclosed in the allegedly anticipating reference (emphasis added, citations in support omitted). *Lindemann Maschinenfabrik GMBH v. American Hoist and Derrick Company et al.*, 730 F. 2d 1452, 221 USPQ 481,485 (Fed. Cir. 1984). In concluding that the '770 Patent did not anticipate the claims, the Federal Circuit in *Lindemann Maschinenfabrik GMBH v. American Hoist and Derrick Company et al.*, at 221 USPQ 485-486, further provides that:

The '770 patent discloses an entirely different device,
composed of parts distinct from those of the claimed invention, and
operating in a different way to process different materials differently.
Thus, there is no possible question of anticipation by equivalents.
Citations omitted.

In the subject application, it is clear that the sheet ejection mechanism is the mechanism from which the sheets being processed are ejected from and received on a receiving device, the tray. It also is clear from the claims of the subject application, that it is this mechanism, which is being

moved from an initial position to a sorting position in a direction that is orthogonal to the sheet transport direction. In light of the foregoing, it is respectfully submitted that the features identified by reference numerals 7, 180b and 140 cannot correspond, to a sheet ejection mechanism of the present invention as hereinafter described.

These features in Takehara correspond to the discharge rollers 7, the bundle discharge roller (transferring means) 180b, and an aligning means 140 that is operably disposed on the intermediate tray 140 or the treating tray. As described in Takehara when sheets are processed, they are ejected from the discharge rollers 7 to the treating or intermediate tray 130 (a first staking tray) and the alignment means acts on the bundle of sheets accumulated on the treating tray so as to shift these sheets into one of first or second aligning positions. The transferring means, the bundle discharge roller, is actuated at some time during the process so a bundle of sheets, for example the bundle of sheets corresponding to a copy of a document, that are accumulated on the treating tray are in transferred in their sorted condition to the second staking tray. In sum, the allegedly corresponding features in Takehara disclose an entirely different device, composed of parts distinct from those of the claimed invention, and operating in a different way to process different materials differently. Thus, it is respectfully submitted that that the allegedly corresponding elements disclosed in Takahara do not in fact correspond to the elements of the claimed invention. It also is clear that the apparatus described in Takehara functions and operates in a different manner from that of the claimed invention. Thus, it cannot be said that Takahara discloses, teaches or suggest in anyway Applicants' invention.

In view of the foregoing Applicants, do not believe that it is necessary to further distinguish the secondary reference beyond noting that this reference does not, and cannot, provide any disclosure nor teaching that overcomes the underlying shortcomings in the primary reference.

As claims 2-4 each depend from claim 1, it is respectfully submitted that each of these claims are allowable at least because of their dependency from a base claim that is considered allowable.

Applicants also respectfully submit that the foregoing remarks distinguishing the image forming apparatus of claim 1 from the combination of references also applies to distinguish the image forming apparatus of claim 5 from the cited combination of references: As was previously indicated by Applicants, there is no discussion in either of the two references to compare the transport interval with a preset reference transport interval and controlling the image forming speed so as to be either of a first image forming speed under certain conditions and a second image forming speed under other conditions based on such a comparison. Further, there is no indication in either of the two references of image forming speed, much less a discussion that the operation of either described image forming apparatus could be intentionally altered so that the image forming operation or process could proceed at a different rate.

As is clear from the subject application, the image forming speed is the speed at which copying is conducted or images are formed. Moreover, there is no discussion in either Takehara or Shiraishi of controlling the image forming speed by reducing the speed in cases where it is determined that the transport interval is less than a predetermined value. In the illustrative

example provided in the subject application, the first image forming speed is indicated as being 26 ppm and the second image forming speed is 24 ppm.

As claims 6-9 each depend from claim 5, it is respectfully submitted that each of these claims are allowable at least because of their dependency from a base claim that is considered allowable.

As provided in MPEP 2143.01, obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. *In re Fine*, 837 F. 2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988); *In re Jones*, 958 F. 2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). As provided above, the references cited, alone or in combination, include no such teaching, suggestion or motivation.

Furthermore, and as provided in MPEP 2143.02, a prior art reference can be combined or modified to reject claims as obvious as long as there is a reasonable expectation of success. *In re Merck & Co., Inc.*, 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986). Additionally, it also has been held that if the proposed modification or combination would change the principle of operation of the prior art invention being modified, then the teachings of the references are not sufficient to render the claims *prima facie* obvious. Further, and as provided in MPEP-2143, the teaching or suggestion to make the claimed combination and the reasonable suggestion of success must both be found in the prior art, not in applicant's disclosure. *In re Vaeck*, 947 F.2d

488, 20 USPQ2d 1438 (Fed. Cir. 1991). As can be seen from the forgoing discussion regarding the disclosures of the cited references, there is no reasonable expectation of success provided in either Takehara or Shiraishi. Also, it is clear from the foregoing discussion that the modification suggested by the Examiner would change the principle of operation of the image forming apparatus disclosed in Takehara.

As provided by the Federal circuit, a 35 U.S.C. §103 rejection based upon a modification of a reference that destroys the intent, purpose or function of the invention disclosed in a reference, is not proper and the prima facie case of obviousness cannot be properly made. In short there would be no technological motivation for engaging in the modification or change. To the contrary, there would be a disincentive. *In re Gordon*, 733 F. 2d 900, 221 USPQ 1125 (Fed. Cir. 1984). In the present case it is clear that if the image forming apparatus disclosed in Takehara was modified in the manner suggested by the Examiner it would destroy the intent, purpose or function of the device as taught by the reference.

It is respectfully submitted that for the foregoing reasons, claims 1-9 are patentable over the cited reference(s) and satisfy the requirements of 35 U.S.C. §103. As such, these claims are allowable.

It is respectfully submitted that the subject application is in a condition for allowance.

Early and favorable action is requested.

Applicant: K. Matsuyama et al.
